

# Python Course | Overview

□ Arun Kumar

# Present day evolution of programming languages

# Projections : Python as mainstream programming language

## Most in-demand programming languages of 2022

*Based on LinkedIn job postings in the USA & Europe*

## Projections of future traffic for major programming languages

Future traffic is predicted with an STL model, along with an 80% prediction interval.

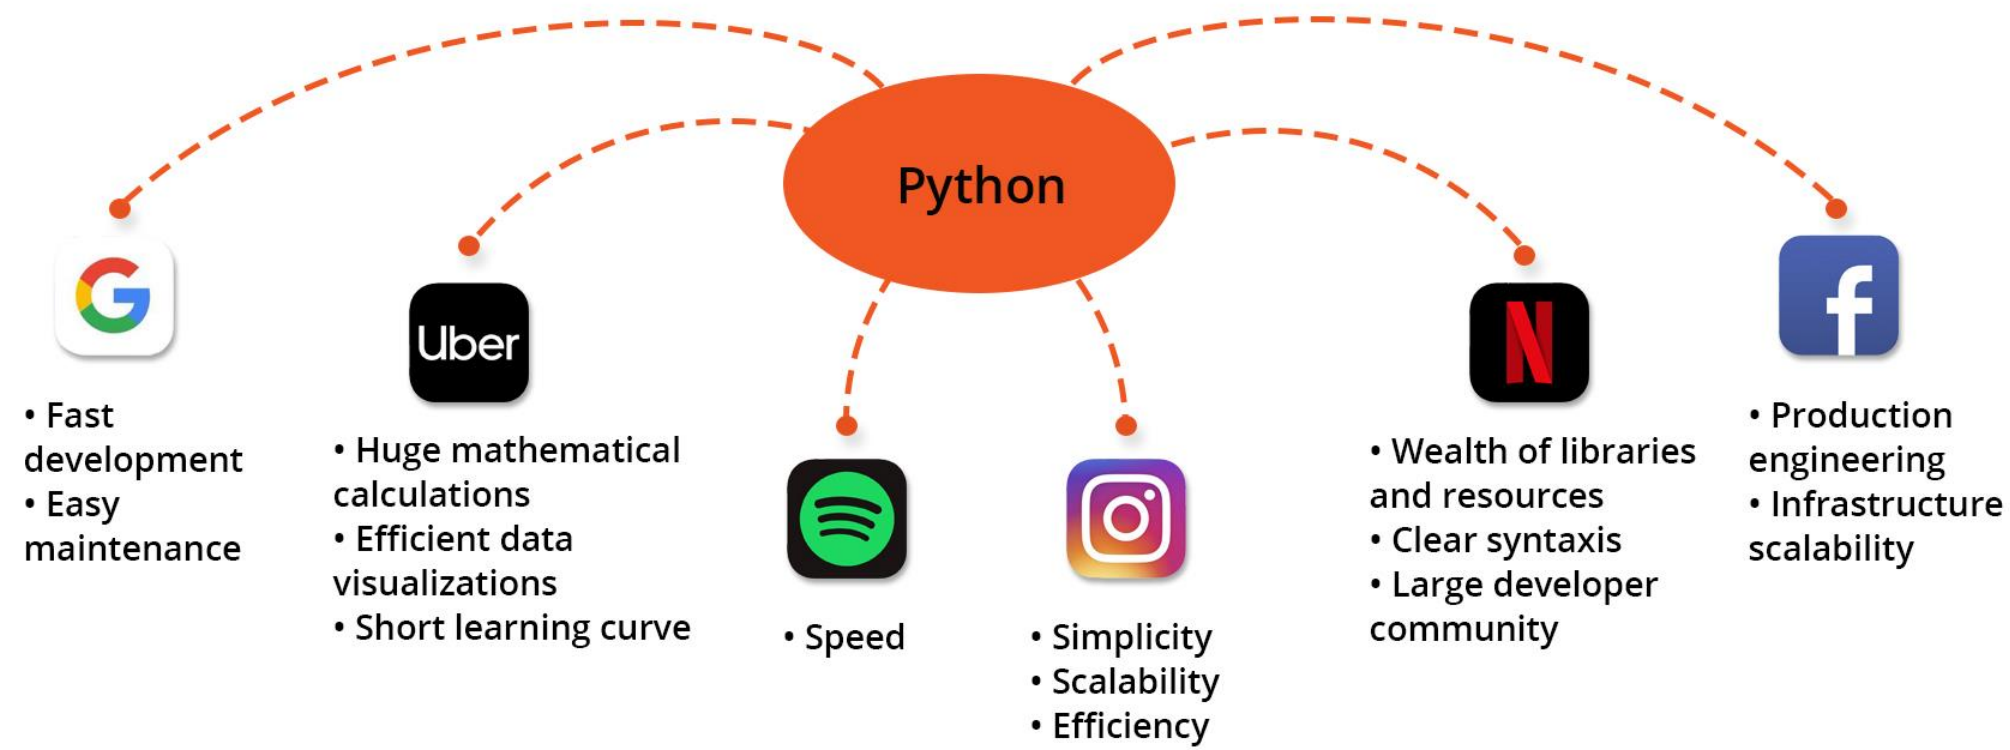

# Shift in preference and usage for Python in Software industry

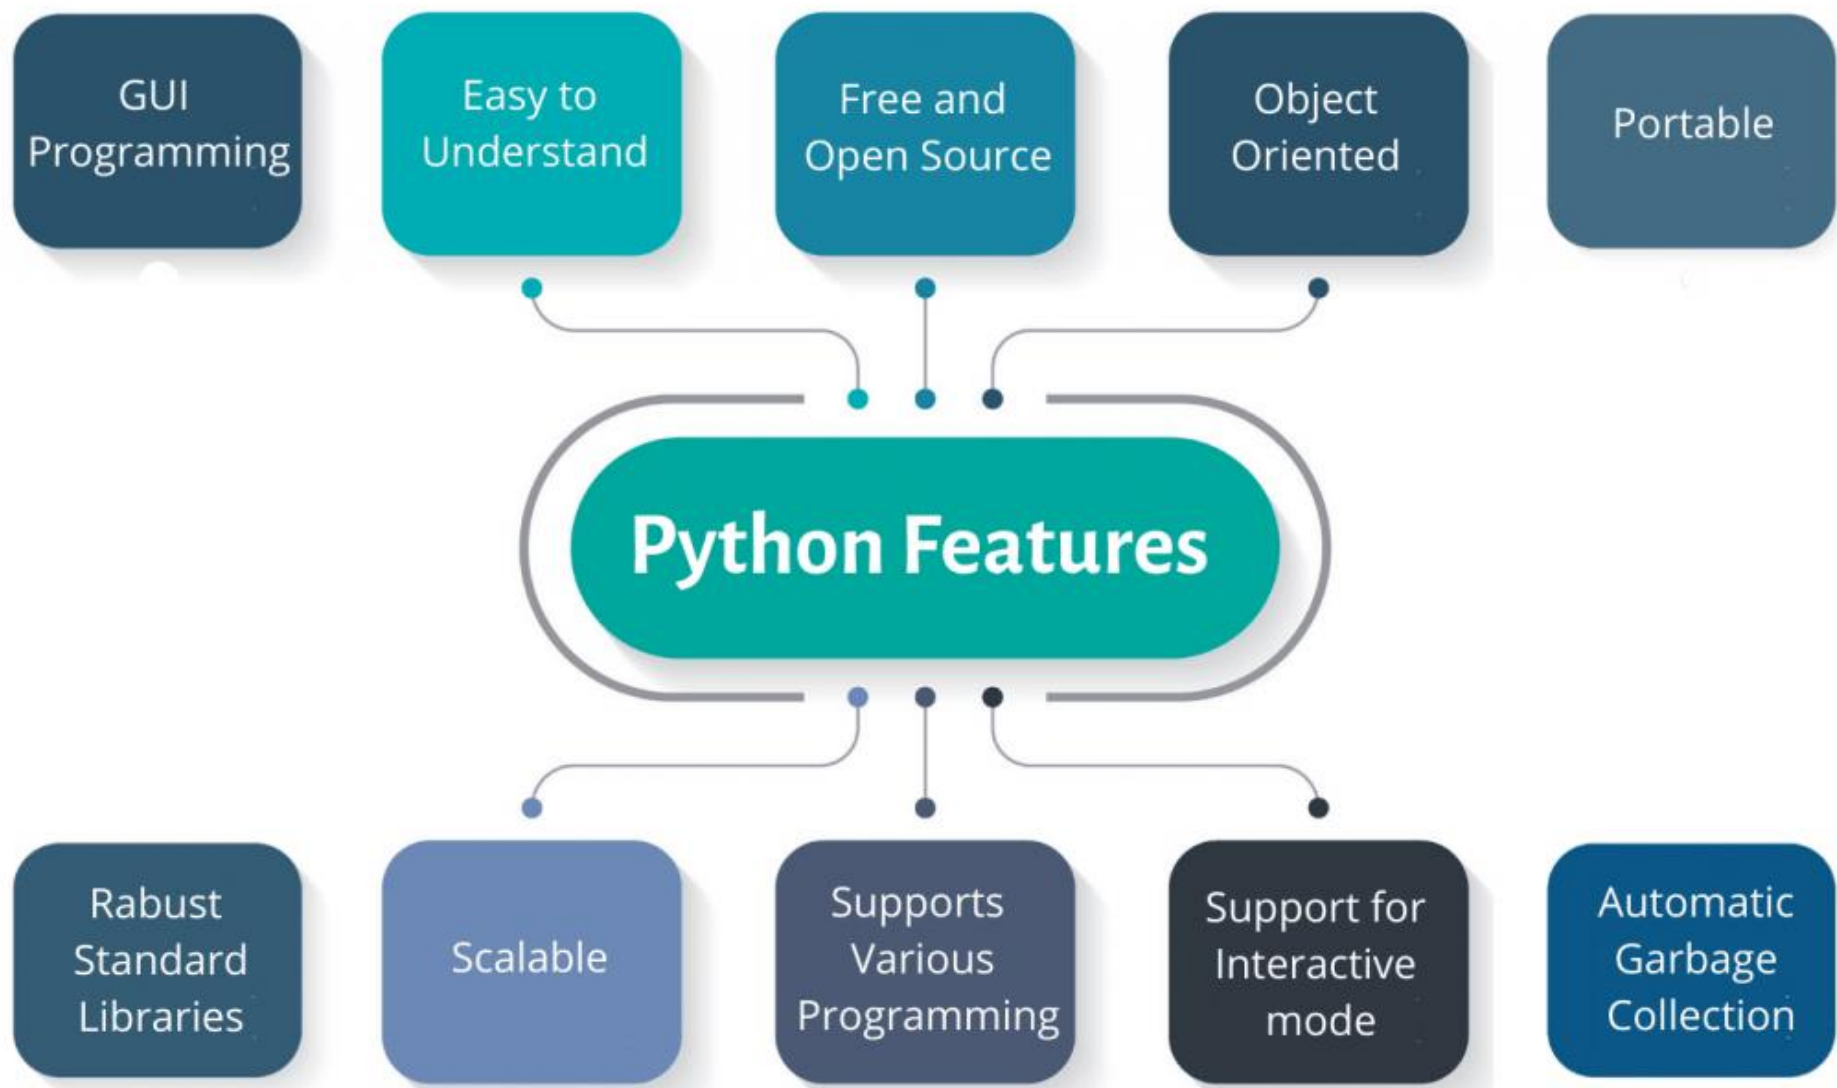

Oct 2021	Oct 2020	Change	Programming Language		Ratings	Change
1	3	⬆️		Python	11.27%	-0.00%
2	1	⬇️		C	11.16%	-5.79%
3	2	⬇️		Java	10.46%	-2.11%
4	4			C++	7.50%	+0.57%
5	5			C#	5.26%	+1.10%
6	6			Visual Basic	5.24%	+1.27%
7	7			JavaScript	2.19%	+0.05%
8	10	⬆️		SQL	2.17%	+0.61%
9	8	⬇️		PHP	2.10%	+0.01%
10	17	⬆️⬆️		Assembly language	2.06%	+0.99%

## Which companies use Python?

# What Value Python Has Brought To Top Apps Built With It

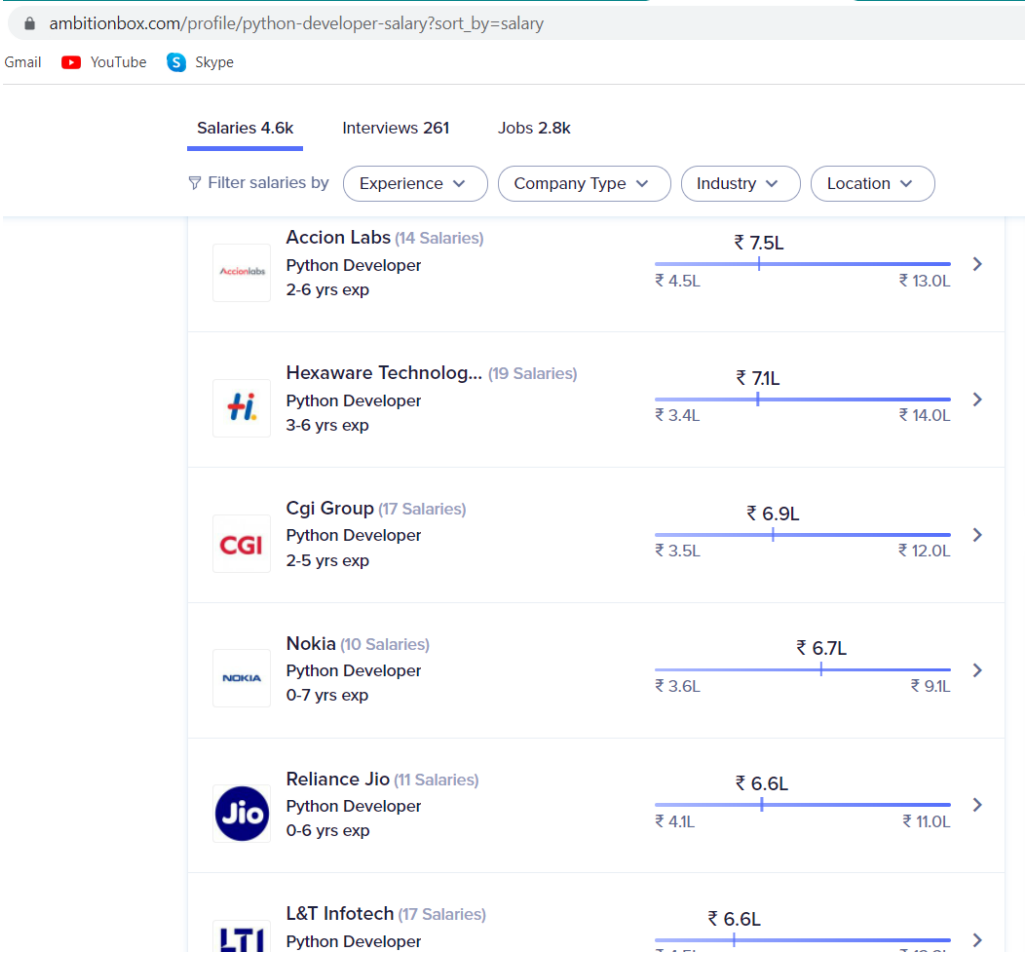

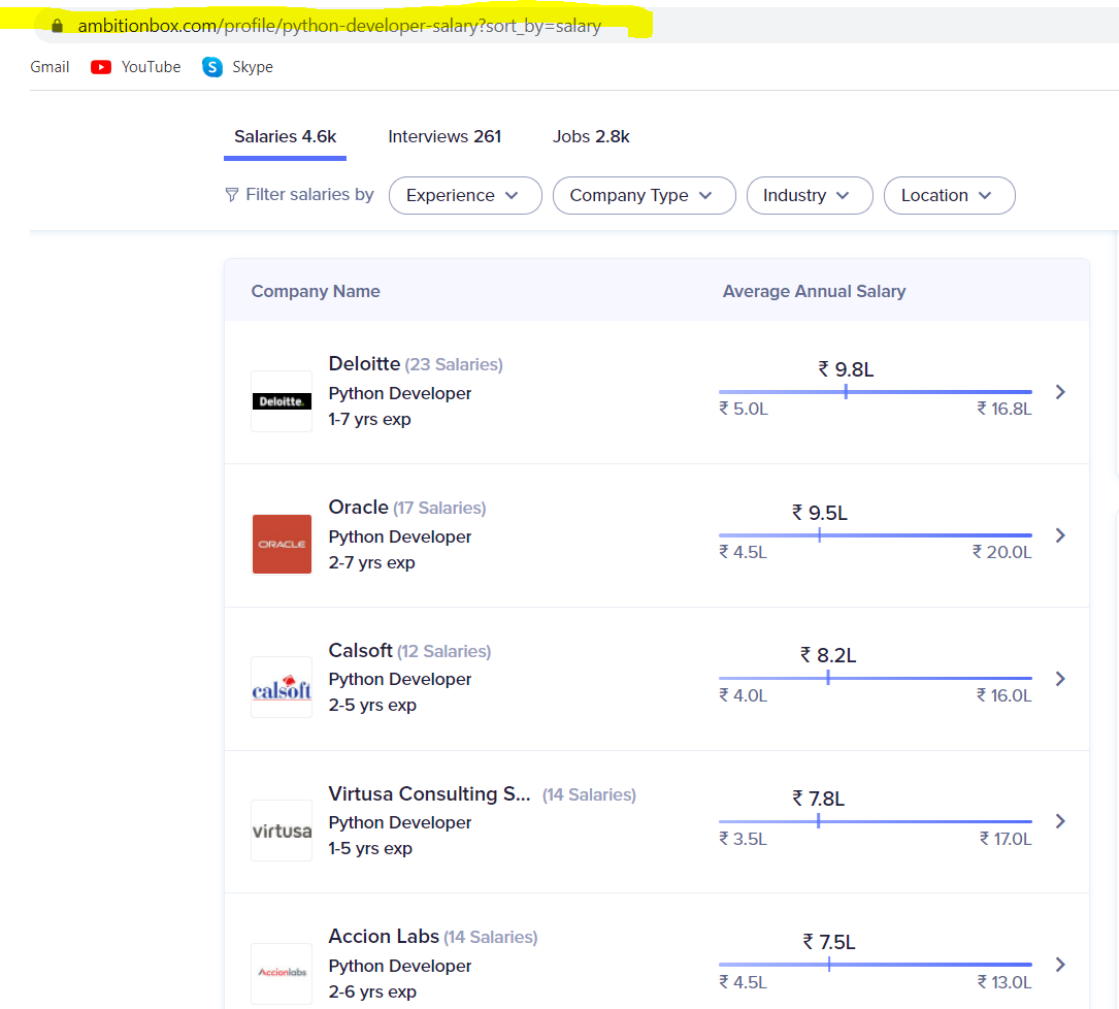

# Average Python Job roles Salary

## Curriculum :

- ✓ **Weekdays batch** : (1 hour / day ,5 days)  
or  
**Weekends batch** (2 hours/day - 2 days )
- ✓ Course duration for **2 months**
- ✓ Course to deliver **Python + Data Analytics**
- ✓ Course level : **Basic -> Proficient** attainment
- ✓ Pre-requisites : Basic knowledge of Computers.
- ✓ Course to focus on **Hands on + Periodic assignments**

# Requirements

- No prior programming experience is required!
- Access to a Computer or Laptop and basic exposure to it

# Course Outcome

- Understand the concept of coding, understand the importance and scope of application of Python language.
- Grasp basic code specifications and learn to write code correctly and normatively .
- Grasp Python basic grammar and learn to use Python language correctly.
- Grasp the attribute understanding and drawing function of basic graphics.
- Understand the concept of objects and classes, grasp the properties and methods of common graphic objects and multimedia objects.
- Understand the concepts of variables and functions, and learn to define and use variables and functions correctly .
- Understand conditional logic, learn to use conditional logic to analyze problems, and be able to use if conditional statement to implement conditional logic.
- Understand the concept of events, understand the basic logical relationship of events, and learn to correctly apply various event codes in the code
- Utilize Data analytics concept to filter , analyze and plot the data to arrive at conclusive results.

# Course Content

## Introduction

Programming Overview , Python – Overview, History, Features, language-Future, job-role prospects, Industrial usages

## Environment setup

Local Environment Setup, Downloading Python, Installation, Setting-up system and Python environment , Environment-PATH, Launching Python and IDE

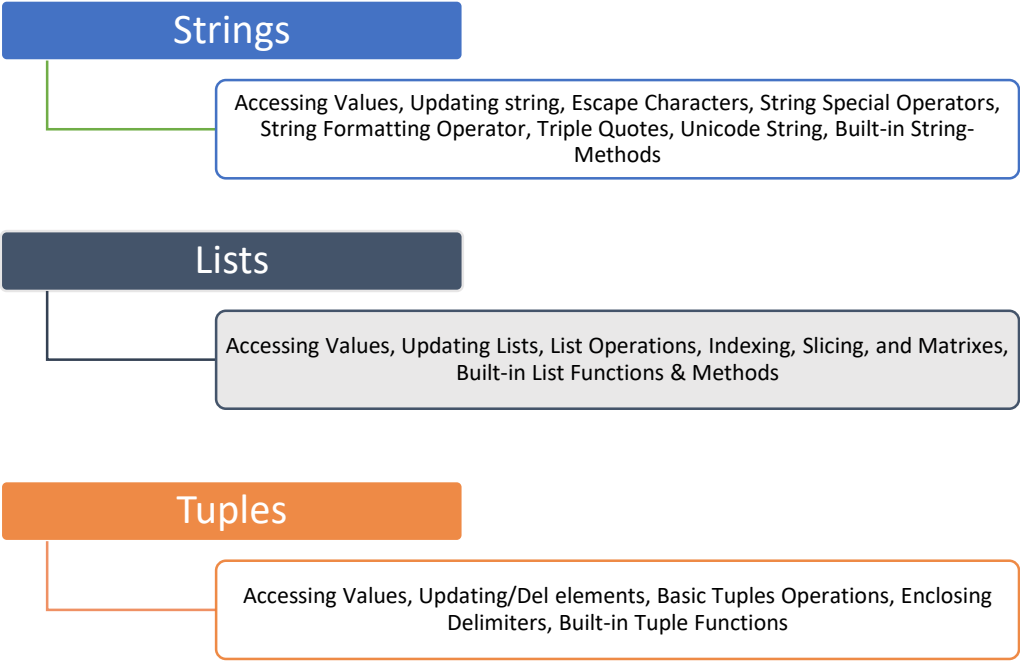

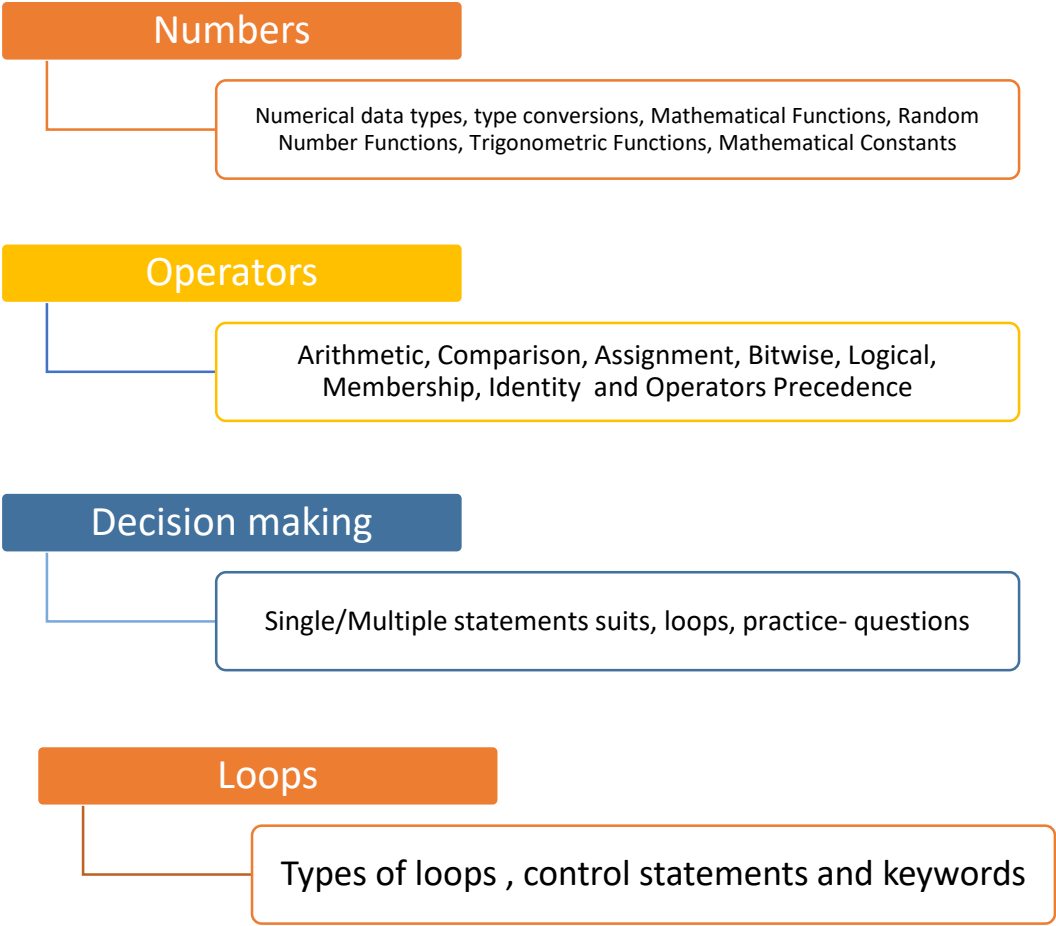

## Initial syntaxes

Interactive coding, script-based coding, Identifiers, Reserved keywords, Lines and Indentation, Multi-Line, Quotations, comments, user input, Multiple Statement Groups as Suites, Command Line Arguments

## Identifiers

Definition, assigning values, Standard and derived data types, data type conversion

-----Topic relevant Assignments for Hands-on coding -----

-----Topic relevant Assignments for Hands-on coding -----

Dictionary

Accessing Values, Updating elements, Properties of Dictionary  
Keys and values, Built-in Dictionary Functions & Methods

Sets

Accessing Values, updating elements, Elements, Properties of sets  
Built-in Sets Functions & Methods

Functions

Definitions, Calling, call by reference, arguments - keyword, default, variable  
length, Anonymous Functions, return Statement, Variables-scope ,Global vs.  
Local variables

Modules

import statement syntaxes, Locating Modules, PYTHONPATH Variable,  
Namespaces and Scoping, dir( ), globals() and locals() , Packages in python

Lists

Accessing Values, Updating Lists, List Operations, Indexing, Slicing, and Matrixes,  
Built-in List Functions & Methods

Files Open-close-read

Reading Keyboard Input, Opening and Closing Files, File methods, the file Object  
Attributes, Renaming, deleting, Directories in Python and its methods

-----Topic relevant Assignments for Hands-on coding -----

Exceptions and Error handling

Types, handling – except, try finally clause, Assertion, raising an exception

Classes and Objects

Overview of OOP Terminology, Creation - Classes, objects , accessing attributes , built-in class attributes , inheritances (class) ,Overriding Methods , Overloading operators

**Data Science Libraries:**  
Pandas / NumPy /Matplotlib /  
Scikit Learn

Read CSV/Excel , Pandas series , data frame , analyzing data , filtering data , cleaning data , Correlations , Plotting data  
Arrays , Array - indexing , slicing , Numpy , datatypes , shape , iterate, join , split , search , sort , filter , data distribution .. etc

Python Projects

Developing  
Scientific Calculator

Analysing a day's  
twitter feed  
published using  
data analytics

Covid-19 Impacts  
Analysis  
(Case Study)

Thank You
